

BBA tests DSL

After 4 years of strenuous research and development, GT Window Products Ltd is delighted to announce that the British Board of Agrément has tested the GT Dummy Sash Lok system to the BS7950 standard on PVCu casement windows and it passed.

This makes for a very exciting opportunity for the sales team who have already been bombarded with enquiries since the product launch at Glassex 2009.

This patented product took 3 years to get to market and is the only system for fitting and releasing glazed dummy sashes into frames. It now covers all of the main stream UK PVCu systems with continuous development of the product into the Timber and Aluminium sectors.
