

Bow Constrictor finally arrives

Bow Constrictor has finally been added to the GT Window Products stock list. As of the 2nd April 2012 it will be available to suit all PVCu profile systems in White, Brown and Tan. This new exciting product will hopefully help fabricators and fitters overcome the seal problems on tall top hung sashes.

It has taken 12 months of testing and trialing different ways of achieving a better gasket seal and this design was found to be the most effective. The acetyl moulding set has been designed to fit any PVCu profile system which also allows for manufacturing tolerances. The two sizes of spring clip is use in conjunction with the moulding set where recommended.

Instruction sheets are available for all systems on the website under the Bow Constrictor location. These offer general instruction on where and how to fit the product. Due to manufacturing tolerance, different combinations of packers and clips may be used to achieve a better gasket seal.
