GT Guardian for doors

Patent pending

Fit Guardian in the hinge area, preferably as central to the hinge as possible.

Due to hinge fixings i.e. screws/dowels, Guardian may have to be fitted off-set to alleviate screws clashing.

We recommend 4.8 X 25mm Pan Head screws

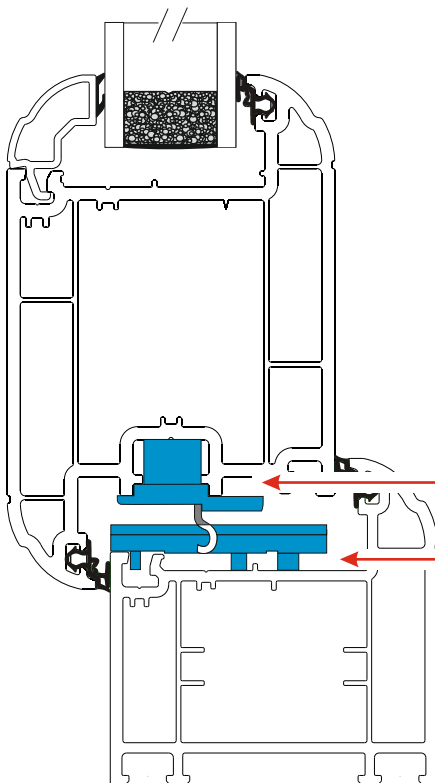

GT Guardian is a revolutionary design in door and window hinge protection systems.

The parts for doors consist of four acetyl profile related mouldings and two high tensile steel components.

Two metal parts and two of the acetyl mouldings form a set. The unique design enables it to be fixed directly to the frame and sash without any need for routing.

This product will offer a higher security rating for doors and windows when tested to UK and European standards.

Different combination of packers and metal parts may be required depending on the system and style of door being manufactured. Contact GT Window Products for more information.

GU004 Sash Packer with SG037/36/35 Stay Guard

GU001/2/3 Frame Packer with GU006/7 Frame Plate

A full list of profile related packers showing which one to use on system profiles is available to read

All fixings, where possible, should go into steel reinforcing.

All drawings are not to scale
Reinforcement and fixings have been omitted for clarity
UK Fasteners screws were used for testing when required
